- Offers excellent insulative qualities
- Knit shells are made using THT™ (True Hand Technology), which provide a great fit and reduces hand fatigue

ABOUT S13FRT

The S13FRT is a multipurpose glove, valued by users for its versatility. There is an opportunity to extend the useful life of this long-lasting glove even more by increasing its durability without compromising on performance.

WHAT HAS CHANGED?

To increase the glove's durability without compromising on its performance, **Protex® will now be used** to make the glove instead of Rhovyl. Protex® is a slightly heavier material, which makes it more durable than Rhovyl while still retaining the same performance and dexterity.

Additionally, due to the inherent properties of the materials, the color of the glove has changed from dark green to black.

This change is part of a rolling change. You may receive the green Rhovyl gloves until stock is depleted.

NOTE: For questions, contact your Territory Manager
